naida is an AI consultancy in Singapore, founded by Uli Hitzel. We help companies build their own AI capability: the strategy, the team and the systems.

Rapid AI Pilot

A 4–8 week pilot that puts one AI use case into operation with your own people, without large upfront investment.

Duration 4–8 weeks

Expected outcomes

- 2–3 high-impact AI use cases identified and validated within the first 4 weeks
- A 10–20% improvement in the key performance metrics of the pilot use case

Overview

Most companies already have people who understand both the business and the technology well enough to run an AI pilot. We help you find them, choose a use case that matters, and build and run the pilot together with them. The result is a working solution and a team that knows how to do the next one.

Scope

- Assessment of AI readiness: skills, data, systems and gaps
- Selection of pilot use cases with key stakeholders, in line with company goals
- A pilot plan that fits your resources and constraints
- A cross-functional pilot team: data scientists, engineers, domain experts and business owners
- A working pilot within 4–8 weeks, built in short iterations
- Metrics for technical performance and business impact
- Support, monitoring and changes during the pilot
- Evaluation after the pilot: results, lessons and whether the solution can scale
- A roadmap for scaling, covering infrastructure, people and change management
- Support during the move from pilot to production
